Assignment – 10

Vehicle Service Request Form — Basic Fields Use Case

Built with Zoho Creator Form Builder

Name: Mukesh Kumar D R
Roll Number: 241501119
Department: AIML

1. Objective

The objective of this exercise is to design a working Vehicle Service Request Form in Zoho Creator that uses all thirteen Basic Fields of the Form Builder in a meaningful way. The form is meant to solve a practical problem faced by an automobile service center: recording service and repair requests in advance so that the work can be planned instead of handled on the spot.

2. Problem Statement

At present the service center accepts requests only by phone. As a result, service bays get double-booked, the reported fault is not recorded before the vehicle arrives, and technicians cannot arrange parts or prepare an estimate beforehand. Customers who walk in without an appointment often wait for a long time. A single online form that captures the owner's identity, contact details, vehicle details, the problem, the preferred schedule, and the owner's authorization to proceed would remove these gaps.

3. Scope of the Use Case

- **Application name:** Vehicle Service & Repair Request Management
- **Form name:** Service_Request_Form
- **Primary users:** Vehicle owners; service center front office and technicians
- **Report view:** Service_Request_Report, a list of all submitted requests
- **Purpose of the report:** Filter requests, fix schedules and assign technicians before the vehicle arrives

4. Basic Fields and Their Mapping

Each of the thirteen Basic Fields is used for the kind of data it handles best. For every field, the form field name, its role and a sample entry used while testing are given below.

- **Name field — Owner_Name:** captures the owner's full name through First and Last name sub-fields. *Sample value:* Priya Natarajan.
- **Email field — Email_Address:** a validated address for the estimate and status updates. *Sample value:* priya.natarajan@example.com.
- **Address field — Pickup_Address:** the address for pickup/drop service when requested. *Sample value:* 22, Lake View Road, Chennai, TN, 600042.
- **Phone field — Contact_Number:** a validated mobile number the center uses to call the owner. *Sample value:* +91 98400 12345.

- **Single Line field — Vehicle_Registration_Number:** a short text entry for the number plate. *Sample value:* TN 09 CD 4321.
- **Multi Line field — Issue_Description:** a detailed description of the problem. *Sample value:* Engine overheats after 20 minutes of driving and the AC cooling is weak.
- **Number field — Odometer_Reading:** the current odometer reading in km, positive values only. *Sample value:* 62850.
- **Date field — Preferred_Service_Date:** the preferred date to bring in the vehicle, chosen from a date picker. *Sample value:* 14-Oct-2026.
- **Time field — Preferred_Dropoff_Time:** the preferred drop-off time at the service bay. *Sample value:* 10:30 AM.
- **Drop Down field — Vehicle_Type:** a single-select list of vehicle categories. *Sample value:* Sedan.
- **Radio field — Service_Type:** one mandatory choice among mutually exclusive service categories. *Sample value:* Routine Service.
- **Multi Select field — Additional_Services_Requested:** one or more add-on services along with the main work. *Sample value:* Wheel Alignment, Car Wash.
- **Checkbox field — Authorize_Estimate_And_Repair:** the owner's consent for the estimate and work to proceed. *Sample value:* Checked.

5. Form Layout (Section-wise)

The form is divided into four sections so that the owner moves through it in a natural order.

- **Section A — Owner Details:** Owner Name (Name), Vehicle Registration Number (Single Line), Vehicle Type (Drop Down).
- **Section B — Contact Details:** Email Address (Email), Contact Number (Phone), Pickup Address (Address).
- **Section C — Vehicle & Issue Details:** Odometer Reading (Number), Service Type (Radio: Routine Service / Breakdown Repair / Accident Repair), Additional Services Requested (Multi Select), Issue Description (Multi Line).
- **Section D — Scheduling & Authorization:** Preferred Service Date (Date), Preferred Drop-off Time (Time), and the authorization statement (Checkbox).

6. Validation Rules Configured

- **Mandatory fields:** Owner Name, Phone, Vehicle Registration Number, Vehicle Type, Service Type and the Authorization checkbox must be filled before submission.
- **Email:** the built-in email format check is enabled so malformed addresses are rejected.
- **Phone:** country-code format is enabled to suit Indian mobile numbers.
- **Odometer Reading:** the Number field accepts positive values only.
- **Preferred Service Date:** past dates are disallowed so that only upcoming slots can be booked.
- **Authorization:** the form cannot be submitted unless the checkbox is ticked.

7. Workflow Summary

1. The owner opens the public form link shared through the service center's website or by SMS.

2. The owner fills in personal, vehicle, issue and scheduling details across the four sections.
3. On Submit, Zoho Creator checks all mandatory fields and formats.
4. A new record is added to Service_Request_Report.
5. An acknowledgement email is sent automatically to the address entered in the Email field.
6. The front office reviews the report, filters by Service Type and Preferred Service Date, and assigns a technician and service bay before the vehicle arrives.

8. Learning Outcomes

- Understood which Basic Field suits which kind of information, for example Radio for exclusive choices and Multi Select for add-ons.
- Learned to arrange a long request form into short, customer-friendly sections.
- Practised mandatory, format and range validations at field level.
- Saw how submitted form values flow into a report that supports scheduling and technician assignment.

9. Conclusion

The Service_Request_Form shows that a complete, validated intake form can be created in Zoho Creator using only the Basic Fields and a small amount of configuration. Moving bookings from phone calls to an online form gives the service center an advance record of each problem, helps avoid double-booked bays, and lets technicians prepare before the vehicle arrives.
